Notes written by Mrs. Pooja Lonkar, Assistant Teacher, ZP School, Nandur (Class 4, Marathi medium). I am writing this down quickly because the headmaster Suresh Raut sir said the CRP may visit soon and I should keep my things ready. So Class 4 has 31 children on the register but on most days only 26 or 27 come, and after the soybean cutting started last week even fewer, some of the girls stay home to look after younger brothers and sisters. In the unit test last month the Marathi reading and writing was mostly fine, about 24 children scored above 50 percent, English is average, most can read the alphabet words but cannot make a sentence on their own. Mathematics is where the real problem is, the maths score is much lower than the other subjects, only about 11 children got above 40 out of 100, and the rest are struggling with subtraction with borrowing and the tables of 6, 7 and 8, many still count on fingers for simple addition. I tried the bead frame twice but we have only one and it breaks, I also made number cards myself from old calendar paper but there is no money for more. EVS marks were good because children like the garden and the village map activity, average around 62 percent. The other issue is the classroom itself, the roof above the back corner leaks when it rains so the children from that side have to move to the front and the front benches get crowded, one wall also has no blackboard paint left so I write on a small board and the last row cannot see. Textbooks for the second term reached us very late, almost three weeks after the school started, and the maths workbook is still missing for about ten children. I told the headmaster and he said he had already informed the block office but nothing has come yet, I also gave a written request to the previous CRP visitor in July about the workbook and number charts, no reply till now. Also Rajendra Kamble sir who teaches Class 5 was on leave for four days so I had to take both classes together in the afternoon, that day I could not do any maths practice at all. Parents meeting was held but only 9 parents came, one parent said the child is weak in numbers and he cannot help because he did not study. I think two or three children in the front row may need their eyes checked because they keep squinting at the board, I am not sure, nobody has checked them. I would like some guidance on how to teach borrowing in subtraction to children who are very weak, and if possible some extra material for the maths remedial group in the last period. I also feel the evening remedial class idea is good but I cannot stay late because of the bus timing. That is all for now, I will write again after the first term exam results come.
